

# MARCOS ROJAS JIMÉNEZ

## JUNIOR SOC ANALYST | CYBERSECURITY | BLUE TEAM

Albacete, Spain | +34 640 155 083 | marcosrojasjimenez2@gmail.com | [www.linkedin.com/in/marcos-rojas-jimenez](https://www.linkedin.com/in/marcos-rojas-jimenez)

Junior Cybersecurity professional with hands-on experience in threat analysis, security event monitoring, incident response fundamentals and email security. Completed a practical Cybersecurity Master's degree focused on real-world environments, including the design and implementation of a secure email infrastructure on a VPS Ubuntu server. Experienced with SPF, DKIM, DMARC, MTA-STS, TLS-RPT, email header analysis, spoofing simulations and Python automation for DMARC report processing. Strong analytical mindset, attention to detail and previous technical background in anomaly detection, fault diagnosis, documentation and incident reporting. Seeking an opportunity as a Junior SOC Analyst to grow in security monitoring, SIEM, threat detection and incident response.

### AREA OF EXPERTISE

|                         |                   |                      |
|-------------------------|-------------------|----------------------|
| SOC Monitoring          | Threat Detection  | Blue Team Operations |
| Security Event Analysis | Incident Response | Anomaly Detection    |
| Alert Triage            | Log Analysis      | SIEM Fundamentals    |
| Python Automation       | Network Security  | DNS Security         |

### KEY ACHIEVEMENTS

- **Secure Email Infrastructure.** Designed and implemented a secure email environment on a real VPS Ubuntu server, integrating SPF, DKIM and DMARC to protect the domain against spoofing attempts.
- **10/10 Email Security Validation.** Achieved a 10/10 validation score in EasyDMARC after configuring and testing domain authentication controls.
- **Threat Simulation & Detection.** Performed controlled spoofing simulations and analyzed email headers to validate SPF, DKIM and DMARC alignment and identify suspicious authentication patterns.
- **Python Automation.** Developed Python scripts to process, classify and analyze DMARC reports, improving visibility into email authentication events and suspicious activity.
- **SOC-Relevant Anomaly Detection.** Built strong analytical skills through previous technical roles involving anomaly detection, fault diagnosis, incident reporting and structured documentation.

### TECHNICAL PROJECTS

#### PhisDefense SOC & Email Security Lab

Cybersecurity case study focused on defensive email security, Blue Team monitoring and SOC-style evidence handling. Deployed and validated a real mail security environment using Postfix, Dovecot, OpenDKIM, OpenDMARC, OpenARC, SPF, DKIM, DMARC p=reject, DNSSEC, MTA-STS, TLS-RPT, STARTTLS and IMAPS TLS. Built an interactive Python/Dash SOC dashboard to visualize 270 security tests and 190 processed SOC events, including SMTP authentication failures, SPF/DKIM validation issues, open relay testing, recipient unknown events and DMARC spoofing rejections.

## PROFESSIONAL EXPERIENCE

---

### Quality Inspector, Tradecorp

Feb 2025 - Dec 2025

- Performed daily quality controls in packaging processes, identifying anomalies, labeling errors, process deviations and potential operational incidents.
- Detected irregular patterns and deviations from expected behavior, developing an analytical mindset directly transferable to SOC monitoring and security event analysis.
- Reported incidents in a structured way to support traceability, escalation and resolution by the responsible teams.
- Applied high attention to detail in repetitive control environments, strengthening skills relevant to alert triage, anomaly detection and incident documentation.
- Contributed to early detection of issues before they progressed further in the production chain, reducing the risk of undetected non-conformities.

### Railway Electrical Installation Technician, Stadler Rail

Oct 2024 - Dec 2024

- Executed technical tests on railway electrical systems, validating installation quality and correct system behavior according to technical requirements.
- Diagnosed electrical faults by analyzing test results, identifying potential causes and supporting corrective actions.
- Prepared technical reports and test documentation, ensuring clear traceability of failures, checks performed and results obtained.
- Followed strict technical procedures in a high-precision environment, reinforcing skills applicable to incident analysis, root cause investigation and evidence-based reporting.

### Electrical Installations Technician, A&J Systems

Aug 2023 - Feb 2024

- Installed, configured and maintained telecommunications, fiber optic and network-related systems in technical field environments.
- Troubleshoot technical incidents by performing initial diagnosis, identifying root causes and applying corrective actions.
- Provided technical support and maintenance, improving problem-solving, communication and incident resolution skills.
- Strengthened practical knowledge of connectivity, network infrastructure, cabling, telecommunications and technical troubleshooting.

## EDUCATION

---

### Cybersecurity Master's Degree, DigitechFP

Oct 2025 - Jun 2026

- Specialized training in cybersecurity, threat analysis, security monitoring, incident response fundamentals and secure infrastructure.
- Final project: PhisDefense, a secure email infrastructure deployed in a real VPS Ubuntu environment.
- Implemented and validated SPF, DKIM and DMARC to protect a domain against spoofing and email impersonation attacks.
- Developed Python scripts for DMARC report processing, classification and analysis.
- Performed email header analysis and controlled spoofing simulations to validate security controls.
- Achieved 10/10 validation in EasyDMARC for the implemented email authentication configuration.

### Higher National Diploma in Telecommunications and Computer Systems, IES Universidad Laboral

Sep 2022 - Jun 2024

- Technical training in telecommunications, computer systems, networking, connectivity and infrastructure maintenance.
- Built a strong foundation in network fundamentals, protocols, technical troubleshooting and system support.
- Developed practical knowledge applicable to SOC environments, including incident diagnosis, network infrastructure and technical documentation.

## TECHNICAL SKILLS

---

- **Cybersecurity & Blue Team:** SOC monitoring, incident analysis, log analysis, threat detection, defensive security validation, evidence handling, security documentation, vulnerability assessment and risk analysis.
- **Network & Systems Security:** Linux administration, secure service configuration, firewall concepts, network protocols, DNS security, TLS validation, email security controls and server hardening.
- **Email Security:** SPF, DKIM, DMARC, DNSSEC, MTA-STS, TLS-RPT, OpenDKIM, OpenDMARC, OpenARC, Postfix and Dovecot.
- **Security Tools & Methodologies:** SIEM-oriented analysis, event classification, security testing, controlled attack simulation, defensive lab environments, CVSS-based assessment and technical reporting.
- **Programming & Automation:** Python, Bash scripting, log parsing, CSV data processing, Pandas, Dash, Plotly and automation of security monitoring workflows.
- **Data & Reporting:** SOC dashboards, KPI visualization, technical evidence collection, incident-oriented documentation, sanitized public datasets and executive security reporting.
- **Web & Infrastructure:** Git, GitHub, GitHub Pages, Render deployment, basic web technologies, server-side services and secure publication of technical projects.

## ADDITIONAL INFORMATION

---

- **Languages:** English B2, French A1, Spanish Native.
- **Certifications:** CCNA: Introduction to Networks — Cisco Networking Academy.
- **Career Focus:** Junior SOC Analyst, Blue Team, Security Monitoring, Threat Detection, Incident Response and Network Security.
- **Technical Interests:** SIEM platforms, log analysis, alert triage, threat intelligence, network traffic analysis, email security and defensive cybersecurity operations.
- **Professional Strengths:** Analytical thinking, attention to detail, anomaly detection, structured incident reporting, technical documentation and continuous learning.
