MARCOS ROJAS JIMÉNEZ

Junior Cybersecurity Analyst | IAM Operations | Security Automation | SOC Monitoring

Albacete, Spain | +34 640 155 083 | marcosrojasjimenez2@gmail.com | LinkedIn: www.linkedin.com/in/marcos-rojas-jimenez
Portfolio: https://marcos-rojas-jimenez.github.io/

PROFESSIONAL SUMMARY

Junior Cybersecurity professional with hands-on lab experience in IAM Operations, security automation, SOC-style monitoring and email security. Completed a practical Cybersecurity Master's degree focused on real-world environments. Built an end-to-end IAM Operations lab using Keycloak, OpenID Connect, RBAC, Python automation over the Keycloak Admin REST API and a Streamlit dashboard covering identity inventory, privileged account review and IAM event monitoring. Previously designed and implemented a secure email infrastructure on a real VPS Ubuntu server with SPF, DKIM and DMARC, validated 10/10 in EasyDMARC. Strong analytical mindset with a technical background in anomaly detection, fault diagnosis, documentation and evidence-based incident reporting. Seeking an entry-level opportunity in IAM Operations or cybersecurity operations.

KEY SKILLS

IAM Operations, Identity and Access Management, SSO, MFA, OpenID Connect, OAuth2, RBAC, Keycloak, Privileged Account Review, Python Automation, Security Monitoring.

KEY ACHIEVEMENTS

- **IAM Operations Lab:** Built an end-to-end IAM Operations lab with Keycloak, OpenID Connect, Flask, Python automation and a Streamlit dashboard, simulating identity inventory, privileged account review, failed login monitoring and admin event review with CSV and Markdown evidence outputs.
- **Secure Email Infrastructure:** Designed and implemented a secure email environment on a real VPS Ubuntu server, integrating SPF, DKIM and DMARC, validated through controlled spoofing simulations and a 10/10 EasyDMARC score.
- **Python Automation:** Developed Python scripts for IAM tasks over the Keycloak Admin REST API (user and role inventory, privileged account detection, daily reporting) and for DMARC report processing, classification and analysis.
- **SOC-Relevant Anomaly Detection:** Built strong analytical skills through previous technical roles involving anomaly detection, fault diagnosis, incident reporting and structured documentation.

TECHNICAL PROJECTS

IAM Operations and CyberIAM Monitoring Lab

End-to-end IAM Operations lab simulating the typical tasks of an IAM IT Operations team. Deployed Keycloak with Docker Compose and configured a dedicated realm with users, RBAC roles and a confidential OIDC client. Built a Flask application protected with the OpenID Connect Authorization Code Flow and role-based access control. Automated IAM tasks with Python and the Keycloak Admin REST API: user and role inventory export, privileged account detection, missing role compliance checks and a daily IAM operations report. Implemented IAM event monitoring for login and admin events, including failed login review and rule-based severity tagging, and a Streamlit dashboard with KPIs, privileged account review and an evidence index based on CSV and Markdown outputs.

Technologies: Keycloak, OpenID Connect, OAuth2, RBAC, Flask, Python, REST API, Docker Compose, Streamlit, pandas, Altair.

PhisDefense SOC and Email Security Lab

Cybersecurity case study focused on defensive email security, Blue Team monitoring and SOC-style evidence handling. Deployed and validated a real mail security environment using Postfix, Dovecot, OpenDKIM, OpenDMARC, OpenARC, SPF, DKIM, DMARC p=reject, DNSSEC, MTA-STS, TLS-RPT, STARTTLS and IMAPS TLS, including SMTP security checks, open relay testing and lookalike domain checks. Built an interactive Python/Dash SOC dashboard to visualize 270 security tests and 190 processed SOC events, including SMTP authentication failures, SPF and DKIM validation issues, recipient unknown events and DMARC spoofing rejections.

PROFESSIONAL EXPERIENCE

Quality Inspector, Tradecorp (Feb 2025 - Dec 2025)

- Performed daily quality controls in packaging processes, identifying anomalies, labeling errors, process deviations and potential operational incidents.
- Reported incidents in a structured way to support traceability, escalation and resolution, applying high attention to detail directly transferable to alert triage and anomaly detection.

Railway Electrical Installation Technician, Stadler Rail (Oct 2024 - Dec 2024)

- Executed technical tests on railway electrical systems, diagnosing faults and validating correct system behavior according to technical requirements.
- Prepared technical reports and test documentation, ensuring clear traceability of failures, checks performed and results obtained in a high-precision environment.

Electrical Installations Technician, A&J Systems (Aug 2023 - Feb 2024)

- Installed, configured and maintained telecommunications, fiber optic and network-related systems in technical field environments.
- Troubleshot technical incidents through initial diagnosis, root cause identification and corrective actions, providing technical support and maintenance.

EDUCATION

Cybersecurity Master's Degree, DigitechFP (Oct 2025 - Jun 2026)

- Practical training in cybersecurity, secure infrastructure, security monitoring, threat analysis and incident response fundamentals.
- Final project: PhisDefense, a secure email infrastructure deployed on a real VPS Ubuntu server with SPF, DKIM and DMARC, validated 10/10 in EasyDMARC.

Higher National Diploma in Telecommunications and Computer Systems, IES Universidad Laboral (Sep 2022 - Jun 2024)

- Technical training in telecommunications, networking, computer systems, connectivity and infrastructure maintenance, with a strong foundation in network fundamentals and technical troubleshooting.

TECHNICAL SKILLS

- **IAM and Access Management:** Keycloak realm administration, OpenID Connect, OAuth2 fundamentals, SAML fundamentals, SSO, MFA concepts, RBAC, privileged account review, IAM event monitoring.
- **Security Operations:** Security event analysis, alert triage, log analysis, threat detection, incident response fundamentals, evidence handling.
- **Email Security:** SPF, DKIM, DMARC, DNSSEC, MTA-STS, TLS-RPT, SMTP security, open relay testing, lookalike domain checks, Postfix, Dovecot.
- **Automation and Scripting:** Python, REST API automation (Keycloak Admin REST API), Bash scripting, PowerShell basics, log parsing, CSV data processing.
- **Dashboards and Reporting:** Streamlit, pandas, Altair, Dash, Plotly, CSV and Markdown evidence reporting.
- **Infrastructure and Tools:** Linux administration, Docker Compose, Flask, Git, GitHub, GitHub Pages, DNS security, TLS validation, ITIL concepts.

CERTIFICATIONS

- CCNA: Introduction to Networks - Cisco Networking Academy.

ADDITIONAL INFORMATION

- **Languages:** Spanish (Native), English (B2), French (A1).
- **Career Focus:** Junior Cybersecurity Analyst focused on IAM Operations, Security Automation, SOC-style Monitoring and Email Security.
- **Professional Strengths:** Analytical thinking, attention to detail, anomaly detection, structured incident reporting, technical documentation and continuous learning.
